

Body Guard

What is The Body Guard?

The Body Guard is a safety device for cars that are modified for wheelchair users. It's designed to protect the user in case of a rear-collision.

Even though the wheelchair is usually sufficiently secured to the car, it isn't built to protect the user in case of a rear impact, because it lacks back and neck support. The Body Guard is foldable back support that has specifically been designed to offer the same protection that a good car seat would.

Technical specifications Body Guard

- Compact and universal. Can be fitted in basically any car.
- Fully adjustable. Can be used in combination with basically all wheelchairs.
- Can be folded to the side of the car, for unobstructed rearview and luggage space.
- Extensively strength-tested, to guarantee the safety of the user.
